Usage:

python3 cyuen7myCurl.py <full URL containing server hostname and destination port>

python3 cyuen7myCurl.py <full URL containing IP address of server to send GET request> <destination port and the hostname of the web server>

Screenshots:

^Request

^Response

Shortcomings:

The program is not completed, it doesn't catch all the errors or write the full HTML to the HTMLoutput.txt. Nor does it pass the test. It kinda works.

Log.csv:

I set up the Log.csv but it's not completed. I tested http://neverssl.com/, and got the header content but that's it.
